

NOTICE OF FUNCTION CHANGE

(DP3 Merrill firmware version 1.02)

The following new functions were added to the DP3 Merrill camera with the new Firmware update (Firmware version 1.02).

ADDITIONAL FUNCTION TO CHANGE FILE NAMES

It is possible to select the file name of the image either from “SDIM” or “DP3M”.

Select the setting from [ **Camera Settings**] (P.28) → [**File Name**].

SDIM (Default)	File name will be “SDIMxxxx.xxx”.
DP3M	File name will be “DP3Mxxxx.xxx”.

- The number in the file name will be continuous even after changing the setting from SDIM to DP3M or vice versa.
- When [**Adobe RGB**] is selected from [ **Shooting Menu**] (P.28) → [**Color space**], the file name will consist of “_SDI” instead of “SDIM”, and become “_P3M” instead of “DP3M”.

OTHER BENEFITS OF THIS FIRMWARE UPDATE

- When you enlarge an image, it used to display the center of the image bigger. However, the new firmware magnifies it depending on the focusing position of the image.
- It displays the size of the file when you select an image and open the Image Info Screen (P.89).
